Program to find the factorial of number(without recursion)

Srep1 - Declare variable and take input from the user for the same.(num)

Step2- Initiate (ans) = 1;

Step3- For loop with condition i<=num, ans = i*ans;

Step4- Printing ans

Start

Declare variable and take input from the user for the same.(num)

for(int i = 1;i<=num;i++)

ans = ans*i

Print ans

End
